PROJECT REPORT

PRASSAN RASTOGI

25BCE10617.

For Task 1, I created a digital literacy awareness infographic using Canva, an online design tool that provides various templates, icons, and customization feaitures. The infograaphic focuses on three key areas: the definition of digital literacy, useful digital tools for students, and safe internet practices. It explains digital literacy as the ability to find, evaluate, create, and communicate information using digital technologies. It also highlights commonly used tools such as Google Docs, cloud storage, and note-taking apps that help students in their academic work. Aditionally, it includes important safety practices like using strong passwords, avoiding suspicious links, and protecting personal information online. While designing the infographic, I found it interesting how visuale elements like icons, colors, and layout can make information easier to understand and more engaging. One diAiculty I faced was organizing all the content neatly without making the design look overcrowded. However, by keeping the information concise and well-structured, I was able to createi a clear and informative infographic. This task improved my understanding of both digital literacy and visual commuinication.

For Task 2, I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and Kaggle. GitHub is a platform used for hosting and sharing code, which helps students showcase their projects and collaborate with others. I created a profile README to introduce myself and highlight my academic background and interests. LinkedIn is a professional netwiorking platform where I added my education details, which will help me conect with professionals, explore internships, and build a strong professional presence. Kaggle is mainly used for data science and machine learning, where users can work on datasets, participate in competitions, and improve their analytical skills. Over the next four years, I plan to actively use GitHub to upload and manage my projects, which will help me build a strong portfolieo. I will use LinkedIn to expand my professional network, learn from industry experts, and stay updated with career opportunities. On Kaggle, I aim to practice data analysis, participate in competitions, and strengthen my skills in machine learning. This will help me grow both technicalliy and professionally.

For Task 3, I used HackerRank and Google Forms to explore coding and collaboration platforms. On HackerRank, I createwd an account and solved a beginner-level problem called “Solve Me First,” which helped me understandi basic programming logic and how coding platforms work. It gave me hands-on experience in writing and executing simple code. For the collaboration part, I created a Google Form titled “Digital Literacy Quiz” with five questions covering topics such as digital literacy, online safeity, and useful tools. I also viewed the responses in Google Sheets, which helped me understand how data can be collected and organized eAiciently. These tools will be very helpful in my academic journey. HackerRank will allow me to continuously improve my coding and problem-solving skills, which are essential for technical subjects. Google Forms wil help me create surveys, quizzes, and collect data for assignments and projects. Overall, this task enhanced my practical understanding of important digital tools used in academicse.

For Task 4, Poor digital communication can lead to misunderstandings and serious problems. For example, a student once sent an email to a professor requesting an assignment extension without a proper subject line, greeting, or clear explanatiion. The email was very short and written in an informal tone, which made it seem unprofessional. As a result, the professor misunderstood the request and did not respond on time, causing the student to miss the oportunity for an extension. This situation could have been avoided by following proper email etiquette. The student should have included a clear subject line, a polite greeting, and a well-structured explanation of the reason for the request. Using a respectfuil tone and proper sign-oA would have made the email more eAective. This shows that clear and professional digital communication is essential to avoid confusion and ensure positve outcomes.

For Task 5, While researching about UPI and online payment fraud, I was most surprised by how easily people can be tricked into losing money through simple methods like fake calls, QR codes, and payment requests. I found it alarming that fraiudsters often create a sense of urgency, which makes people act quickly without thinking. Even educated individuals and students can become victims if they are not careful. One important habit I will personally change is being more cautious while makeing online transactions. I will never share my UPI PIN or OTP with anyone and will always verify the authenticity of any payment request before approving it. I will also avoid scaning unknown QR codes and clicking on suspicious links. This awareness will help me stay safe and use digital platforms more responsibly.
